It is recommended that the product only be employed for the purposes advised.

Gypsum is composed of **calcium sulphate (CaSO₄)**. The impurities in gypsum products usually contain clays, carbonates or marls depending on the location of the quarries where the mineral is extracted and these may contain small concentrations of silica (amorphous or crystalline).

Gypsum products have no or very low percentages of silica, and even if silica is present, its presence is so low that it should not pose a significant health risk.

If powdery material may be generated due to the handling of gypsum products, the use of a mask is recommended, as well as ensuring that the workplace is well ventilated, and the use of gloves and safety goggles is also recommended.

Abbreviations and acronyms used:

CEN: European Committee for Standardization.
DMEL: Derived Minimal Effect Level, exposure level corresponding to a low risk, that risk should be considered a tolerable minimum.
